Zyqor — 12 reference reels: frame-by-frame breakdown + SFX gap

Nov 4 2026 · for Sujon (Zyqor Studio) · every file decoded at 60 fps equivalent (sources are 24/29.97/30 fps, one is true 60 fps → no source holds more than its own frames); contact sheets of 60 frames per second were produced for every second of every reference. Raw/before panels are ignored: refs 5 and 6 were analysed on the EDIT panel crop only.

How to read: [M] = measured by code (frame diffs, scene scores, loudness, spectra). **[E]** = eyeballed: I looked at 3 fps contact sheets of the whole file plus 60 fps / native-fps frame bursts around 12 key moments (one per reference; every frame of each burst viewed). I cannot listen: nothing about sound is a hearing — only numbers from the audio files. I did NOT view every one of the ~34,000 decoded frames individually; the other seconds are covered by 3 fps sheets (honest limit).

1. Measured overview [M]

#	Reference	Len s	fps / size	Hard cuts (scene>0.3) /min	Avg shot s	Incl. graphic changes (>0.15) /min · shot s	Flash frames	Edited part
1	Creativity is Dead (imzache)	39.2	30 / 1080x1920	39.8 (26)	1.45	93 · 0.63	17	whole video
2	Pacing (imzache)	35.7	30 / 1080x1920	50.4 (30)	1.15	72 · 0.81	6	whole video
3	Button/Higgsfield promo (16:9)	29.1	30 / 1920x1080	37.1 (18)	1.53	45 · 1.27	1	whole video
4	Barsol Media 'Proof' reel	29.1	30 / 1080x1920	14.4 (7)	3.63	25 · 2.24	2	whole video
5	Raw vs Edit (editingworld8755)	23.1	60 / 1080x1920	15.6 (6)	3.30	21 · 2.56	n/a (crop)	RIGHT phone panel only
6	Before/After 'Tahrima' (purple studio)	45.6	29.97 / 1080x1920	6.6 (5)	7.60	13 · 4.15	n/a (crop)	RIGHT 'After' panel only
7	Barsol Media 'Win/Recap' reel	32.5	30 / 1080x1920	29.6 (16)	1.91	44 · 1.30	6	whole video
8	Instagram Save-Reminders UI concept (@mosycreate)	39.0	30 / 1080x810	6.2 (4)	7.80	6 · 7.80	0	whole video
9	What is your story? (imzache, 77 s)	77.8	24 / 1440x1080	25.4 (33)	2.29	47 · 1.26	15	whole video
10	Hooks/ZOOM reel (imzache)	37.5	30 / 1080x1920	32.0 (20)	1.79	43 · 1.34	2	whole video
11	My intro/Camera (imzache)	44.9	29.97 / 1080x1920	24.0 (18)	2.36	25 · 2.25	13	whole video
12	'How I made this video' (Blender+editor breakdown)	52.7	24 / 1080x1920	13.7 (12)	4.05	31 · 1.88	7	whole video

Median of the 12: **24.7 hard cuts/min, 2.3 s average shot** (range 6.6/min for the slow ref 6 to 50.4/min for ref 2). Fast refs (1,2,3,7,10) cut every 1.2–1.9 s; calmer refs (4,5,6,8,12) every 3.3–7.8 s but keep motion alive with overlays (cards, text, zooms). Scene scores run on a 270 px copy at native frame rate; a 'flash' = brightness jump found by ref_breakdown.py. Cut clusters closer than 0.2 s are merged.

2. Per-reference cards [E unless tagged]

1 · Creativity is Dead (imzache) — 39.2 s, 39.8 cuts/min [M]. Edited part: whole reel is the edit (single creator talking head, no raw side)

Text styles	Heavy bold white grotesque (Helvetica/Inter-Black look) 1-3 words per beat; keyword in RED extruded 3D with glossy bevel highlight (IS DEAD, USED, MYSELF, NOT, THAT'S, CHAOTIC, POSTING FEELS HARD, NOTHING WORKS, ONE STRUCTURE, AGAIN, SHARPER, UP); GOLD extruded for 'CREATIVE/CREATIVITY/IDEAS/Creativity'; chrome/steel extruded 'THAT'S CHAOTIC'/'FLOW'; script-serif italic accent ('again'); white paper-tape label strips with black caps (NOT / BECAUSE / I'M NOT); text on a circle path around head (0.3-1.0 s); letters scatter/rotate per-letter (PEOPLE, STRUCTURE); small lowercase white connector words ('a new','every') in Helvetica. Glow: warm orange bloom/edge-light on gold & neon-orange sign CREATIVE, soft red halo on red words; yes warm glow, no purple/cyan. Ending 35.7-39: plain talking head, white heavy captions one word at a time bottom/centre, yellow-gold keyword with quotes ("Creativity"). 'CREATIVITY ISN'T DEAD' builds word by word on dark with red halo (33-34).
Backgrounds / scenes	mostly dark/black vignette; scenes swap every ~1-2 s: dark room, B/W airplane window, B/W tarmac, white spotlight disc with silhouette hand holding pen, laptop top-down, cream radial sunburst rays behind head (white/grey jagged rays), red torn-paper page, spiky cream/peach starburst badge behind red STYLE, wooden picture frame held by person containing the talking head
Camera	whip/spin with radial blur + zoom into frame (29.3), frame-in-frame tilt (34.3-35), push-in/zoom on cards, 3D-perspective tilt of rounded phone-card (1.3-2.7, 11.3-14.3)
Transitions (with timestamps)	rounded-corner card (phone shape) pop-in with defocus blur (1.33), white diagonal torn-paper/strip wipe (4.67, 30.33), red torn-paper reveal (21.67-22.67), radial light-ray flash (35.33), blur-to-sharp defocus match cut (20.0), B/W desaturate cutaway (30.67-32), hard cut + 1-3 frame white flash (1.17, 4.83, 9.27...)
Colour grade	warm orange/amber shadows on creator, deep black crush, vignette; B/W inserts high contrast; red #D01818-ish + gold #E6B800-ish accents
Text-as-UI	cursor-click on yellow 'LATER' bookmark pill (8.67-9.2) - text-as-UI
Human-made cues	per-letter jitter/rotation, rough torn edges, uneven sticker rotation, filmic light bloom, hand-held frame wobble

2 · Pacing (imzache) — 35.7 s, 50.4 cuts/min [M]. Edited part: whole reel is the edit (same creator imzache, talking head)

Text styles	White heavy grotesque sentence stacks in varied sizes ('So you wanna learn / how to make / Better Content?'), keywords in YELLOW (#FFD400-ish) heavy with soft yellow bloom/neon glow, some slightly rotated/skewed, per-word pop with blur-in and mask reveal ('lea' cropped); gold 3D scattered letters as a title backdrop (2.67); cursor click on a bookmark icon → rounded phone-card pop (6.0-7.0) 'So save this video.'; later words (First / is Visual Movement) yellow with glow. Most of the reel (13-35 s) is ONE word at a time, white heavy grotesque centred over torso, new word every ~0.3-0.4 s (word-sync captions); yellow small-cap accent words stacked under big white words ('have/Value/Density', 'AND/Delivery'); red extruded 'TALK LIKE THIS' with red neon halo and horizontal glitch-stretch on 'THIS' (13.7-14.3).
Backgrounds / scenes	warm lamp-lit office (amber), dark sofa room, blue-lit keyboard insert (3.0-3.3, blue glow = reference only, we skip), purple/lilac collage of eye photos (10.33-11.67, we skip purple), pure white flash frame (12.0), backlit silhouette against round light (12.3-13); B-roll cutaways every 1-3 s keyed to words (eyes-closed portrait, sunglasses B/W, desk papers+magnifier, hands on stove, window silhouette, cracked-glass crack overlay with chromatic aberration 27.33, datamosh/pixel-glitch + red 28.67, black card 'Cut it' 29.67)
Camera	whip-blur / motion blur between beats (1.67), defocus rack blur (4.0-4.33), push-in
Transitions (with timestamps)	hard cuts 0.33-1 s, blur whip, white flash, rounded card pop
Colour grade	orange/amber warm lamps, black crush; some blue/purple inserts
Human-made cues	uneven word sizes/rotations, blur pops

3 · Button/Higgsfield promo (16:9) — 29.1 s, 37.1 cuts/min [M]. Edited part: whole video (it is a polished promo/SaaS-style edit, 16:9 1920x1080, not before/after)

Text styles	Text-as-UI: sentence 'We've all pressed this [Button] before' in soft light sans on a landscape, the word 'Button' becomes a real blue UI pill, a cursor-hand arrow clicks it (1.0-3.0); next 3.33-7.67 the pill morphs every ~0.33 s into brand-style buttons (Apple Pay, Buy GPT 5, Try Grok, Buy Claude, Upgrade This, Get Gemini, Try Perplexity, Try Runway, Luma AI, Get Sora, Buy Claude) each on its own background colour (white, black, navy, lime, red, terracotta); big white thin-bold 'But.' 'But...' (7.67-8.0); giant black bold text with blinking text-cursor bar and blur-in letters ('Button|') on pale yellow-green gradient (8.3-9.7); blue pill label 'Life saver' / 'Higgsfield' between two Michelangelo hands (10-12.3); small dark sans 'No more endless ai subscriptions' with blue keyword + emoji fire bubble; curved arc text 'No more unnecessary costs' in white/red letters scattering on black with cursor popping letters (15-16.7, 3D perspective tilt); 'Pay once, And done (:' with blue hand-drawn underline; 'Video/Voice/Image/Motion/Creation' black label boxes on a collage of photos (rotating ring of thumbnails 18.67-19.3, tilted collage 20-22.6); logo lockup 'All in one place.' lime square icon -> black end card.
Backgrounds / scenes	very clean: soft gradient hills (green/teal), pale grey/white UI canvases, black end card; collage of photos/cards with parallax; brand-coloured flat backgrounds; Michelangelo-hands cloud image
Camera	scale pops, cursor movement, 3D tilt of text arc and collage, crossfades to white; no handheld
Transitions (with timestamps)	hard cut every 0.33 s on beat during button run (4.0-7.5), blur dissolve, zoom-through, fade to white (12.5, 22.7), logo morph
Colour grade	clean bright (no film look), blue/lime UI accents, minimal grain
Text-as-UI	THE core idea: cursor-hand clicks, hover, typing bar, pill buttons, tooltip card with play button (Voice/Select voice 19.3)
Human-made cues	cursor path wobble, slight overshoot on button scale, staggered letters; still feels designed (not handheld)

4 · Barsol Media 'Proof' reel — 29.1 s, 14.4 cuts/min [M]. Edited part: whole video is the edit (Barsol Media agency promo, woman talking to camera, cinema-lit room with orange leaf wallpaper)

Text styles	Two-tone system: thin/medium white geometric sans (Gotham/Montserrat-like) + RED heavy italic condensed 'impact' words with flat extrusion (PROOF, TRUST, BRANDS, REAL, deliver(s), properly, consistently, already, Pro); words placed ALONG CURVES and perspective-warped around the body (arc over head 'nobody cares about your logo.' 1.7-3.0, 'turn what you already do into Pro proof' 20.7-23.0), per-word scale pop, some words behind the hand/arm; orange-white neon glow stroke on 'what' (24.0); small white 'ten grand' type over red torn paper; glossy red 'AMERICAN-style' stamp ('NOBODY CARES' paper flying 3.3-4.0) ; red sparks/glitch particles near 'logo.'.
Backgrounds / scenes	real shot (talking head, warm orange wallpaper with light shafts); red page + torn white paper revealing $100 bill (5.67-6.67); Louvre gallery with Mona Lisa b-roll (15-18) and 3D text sitting in the gallery; B/W desaturated high-contrast flash (1.0-1.33); laptop POV b-roll (9.67-11); phone-frame tilted mockup (13.33-14.67); black end card with white bokeh particles (24-28).
Camera	digital punch-in/zoom (1.67 blurred, 7.0 close-up, 23.0 close-up with defocus), whip blur, orbit/tilt of phone frame
Transitions (with timestamps)	white flash first frame (0.0), B/W flash cut (1.0), red light-leak flash (4.33), torn-paper reveal (5.67), face-feature collage tiles (eyes, mouth) (7.33-9.33, a punctuation 'hook'), glass-shatter-like split cut, particle bokeh to logo
Colour grade	warm orange wallpaper, teal shadows, bright lamp rim light; B/W inserts; red = brand accent
Human-made cues	word rotation/arc offsets, uneven sizes, paper edges rough, particles random

5 · Raw vs Edit (editingworld8755) — 23.1 s, 15.6 cuts/min [M]. Edited part: EDIT = the right rounded phone panel only (crop x443 y485 573x1016 of the 1080x1920 frame, measured/eyeballed); left B/W raw panel ignored per Sujon's rule. Source is true 60 fps.

Text styles	Small, refined captions (not shouty): bold humanist/rounded sans in cream-white with a soft peach glow ('LOOKING' with split-letter style 1.8-2.2, 'Explain', 'our clothes', 'Indian brand', 'Change'), lighter small connectors ('that I'm really', 'start switching to'); one HEAVY dark condensed extruded word 'Intelligent' with long soft drop shadow and a tiny italic serif 'apparel' on top (5.6-7.0); handwritten script 'haven't evolved to keep up' with red-orange hand underline drawn on, on plain peach gradient (14.3-16.0); year ruler timeline (2020/2021/.../2026) scrolling like a tape measure (2.3-3.6); 3D emoji stickers (thinking faces) in the 4 corners (0-1.4); numeral '1' + script 'think' (0.7-1.4).
Backgrounds / scenes	peach/coral gradient (#FFD7BE -> #FF7A3D) rounded phone frame; real room with warm window light; orange corridor with cut-out dancer (5.0-7.0) with water-splash overlay; dark graphite grid with keyhole spotlight and tiny icons (9.3-12.5) ending in orange radial glow burst (12.67); wavy coral arc with photo-cards sliding along it (17.7-20.0, each card has orange border + label).
Camera	slight digital push-in on the speaker; lock-off otherwise
Transitions (with timestamps)	1-2 frame white-slit vertical wipe (17.33), green tint flash on 'They demand' (16.0), orange bloom (12.67), hard cuts, slide-along-arc cards, peach wipes
Colour grade	warm pastel peach, soft highlights, no heavy crush - bright, airy
Human-made cues	script writing-on stroke, cards slightly rotated, emoji stickers at random angles

6 · Before/After 'Tahrima' (purple studio) — 45.6 s, 6.6 cuts/min [M]. Edited part: EDIT = right 'After' phone panel only (crop x354 y168 646x981 of 1080x1920, eyeballed on frame 3.0 s); left B/W 'Before' ignored. NOTE the edit is a purple/violet studio - banned in our kit; we copy structure, not colour.

Text styles	Small white sans captions with soft WHITE glow, word-by-word on the chest/mic area, one accent word grows big and bold ('look', 'think', 'animations', 'effects', 'just', 'your edit', 'boring', 'good'); neon-outline oval tags ('nothing' cyan outline + glow, 'like what', 'insagram' magenta glow) — cyan/magenta are reference-only, skipped for us; numbered list cards: giant ghost numeral 1/2/3 + glowing rounded-diamond icon + lowercase label ('lack of direction', 'bad design', 'poor post production') on near-black navy (5.67-7.33, 20.33-21.5, 30.33-32.5); text-as-UI chip stack: outlined pills 'vignette / blurs / aberration / noise / posterize' dropping in one by one over a dimmed copy of the clip (36.67-41.0); 'lost' turns from lilac to red neon as the grade flips to deep red (17.33-20.0).
Backgrounds / scenes	purple studio backdrop with RØDE mic (live-action), dark navy card scenes, deep red grade scene, dimmed clip behind UI chips, white neon frame with floating giant eyeballs (9.33-11.0)
Camera	slow digital push-in 2.0-4.0 and 17.3-20.0 (face crop fills frame), punch-in cut to wide, light handheld none
Transitions (with timestamps)	only ~5 hard scene changes (7.51, 11.34, 17.45, 20.19, 45.41 s measured crop) - the rest is overlay animation on one continuous take; card scenes cut in/out with 1-frame dissolve
Colour grade	purple/violet key, blue shadows (reference-only); red grade variant for 'lost'
Human-made cues	pace is slower than refs 1-4: whole sentences with one accent word, long untouched stretches (13-17 s, 22-30 s)

7 · Barsol Media 'Win/Recap' reel — 32.5 s, 29.6 cuts/min [M]. Edited part: Whole reel is the edit (Barsol Media, same agency as ref 4; the first ~1.2 s is un-texted raw shot, no split-screen; Sujon confirmed 'only the edited part' for ref 7 - nothing in this file is a raw/before panel that I could see).

Text styles	CLOSEST TO OUR BEHIND-HEAD REEL: giant RED condensed heavy caps (Anton/Bebas-like, #C4161C-ish, slightly distressed/grainy, flat-extruded edge) BEHIND the cut-out subject: 'WIN' (1.3-2.7, appears white first then fills red inside a thin red outline box), 'WRONG' with dry-brush/streaked edge (6.0), 'DEAL' (17.0-17.7, huge, leaning), 'ALLOWS' (21.3-21.7, behind seated person), 'MARKETING' (23.0-23.3, behind person on black); small white geometric sans (Poppins/Montserrat) words flying in/out with motion-blur trails ('It convinces VENUES'), words placed ON CURVED PATHS ('Everything else' arc 23.7-24.3; 'to give you' on a thin red curve 16.0-16.7); white rounded-rect STICKER labels with soft drop shadow carrying red 'RECAP' / 'BONUS' (18-19.3); stencil 'SPONSORS' red/white with film grain + fish-eye barrel + shake on black (13.0-13.7); distressed red 'RECAP' title above stacked rounded photo cards (9.67-12.0).
Backgrounds / scenes	cut-out subject on cream/beige studio (6.3-9.3), white void with a thin red curved line (14-17), cinema-red studio (live shot), black void with red floor (22-23.5), dark card scenes; photo-card stack AROUND the subject (7.0-9.3: 6+ rounded photo cards fly in behind/around her, with white card flash at 9.33), B/W+blue party photos cards (9.67-12.0)
Camera	fast whip-pan blur between beats (3.0, 15.67, 19.67, 21.0), hard push-in on face (3.67-5.33 close-up 'sipping drink' b-roll), wide lock-off with text, silhouette blackout reveal (14.0)
Transitions (with timestamps)	whip/blur pan, white card flash (9.33), logo bokeh reveal at the end (28.3-30.3: black, white bokeh dots, red dots, logo wipes in with glow), silhouette-to-person (14.0->14.33), black flash
Colour grade	strong red/crimson room vs teal-blue shadow (teal/orange-ish), high contrast, vignette; white scenes bright
Human-made cues	distressed/grain texture on red words, motion-blur trails, off-axis rotation, drop shadows, uneven card stack angles

8 · Instagram Save-Reminders UI concept (@mosycreate) — 39.0 s, 6.2 cuts/min [M]. Edited part: Whole video is motion design (SaaS/UI concept, 4:3 1080x810, @mosycreate, end card says 'MADE BY A HUMAN - An unofficial concept for Instagram'). No raw footage at all.

Text styles	Text-as-UI kinetic: tiny clean white Inter-like sans lines on dark gradient with warm orange/pink bottom glow ('And just like that...' 2.67-3.67, word-by-word with blur-in); bold white 'You lose' with a tiny 'SEE IT!!' thumbnail inserted inline (4.0-4.4); gradient (magenta->orange) giant 'YOU' flying through (4.67); black heavy wide grotesque 'COLLECTION' on light grey (6.0-6.5); 'But, what if [IG icon]' with halftone dot-grid background and magenta/purple/orange colour blobs (6.67-7.67); light-grey UI canvas: 'Instagram had Save Reminders?' with 'Save Reminders' bold and gradient 'inders' (8.0-9.3); cursor hover/click ring on bookmark icon (9.3-9.7) -> bookmark icon morphs into a toggle card 'Reminder / Apply Reminder' (10.0-11.7: toggle slides green, button press ripple); the bookmark turns into a 3D black bookmark 'And done..!' with soft contact shadow (11.3-12.3); notification banner stack 'Instagram - when you need that post □‼' flies in with 3D tilt (12.67-14.67); feed scroll with tiny captions; yellow neon hand-scribbled 'Forever' (26.7-30.7).
Backgrounds / scenes	light grey UI canvas (#EDEDED), black halftone gradient, warm golden vignette (photo of girl in amber light 19-25, with film-frame vignette + bloom), pure black end card
Camera	whip-scroll vertical motion blur between screens (2.0, 5.0-5.7), zoom-through into card (15.67-16.0), slow push-in on amber photo (19.3-25.0), pull-back to feed
Transitions (with timestamps)	motion-blur scroll/whip (1.67-2.33 and 5.0-5.7), dissolves through black, zoom-through, bright flare to white (26.0-27.0), fade to black end card
Colour grade	clean UI light for text, amber/golden film look with strong vignette for the photo; magenta/purple present only as Instagram brand gradient (reference-only)
Text-as-UI	strongest text-as-UI reference: cursor ripple, toggle, press button, notification cards, bookmark morph
Human-made cues	neon scribble 'Forever' drawn on stroke by stroke, handwriting captions in brackets '[that photo of her?]', slight rotation on cards, film vignette

9 · What is your story? (imzache, 77 s) — 77.8 s, 25.4 cuts/min [M]. Edited part: Whole video (77.8 s, 24 fps source, 1440x1080 4:3 - longest; story-format with documentary/cinematic b-roll plus talking head 'What is your story?' by imzache; same creator as refs 1-2, but a slower narrative mode).

Text styles	Two caption systems: (A) narration captions = tiny gold/yellow italic serif-sans (#E8B63A-ish) word-by-word centred low in frame (everywhere on b-roll); (B) hero words in the talking head: white bold Inter-like with ONE word in heavy red/yellow extruded condensed ('COMPUTER' yellow serif-condensed with outer glow 14.7-16, 'BROKE' orange-red 3D 48.0, 'THING' red extruded 8.0, 'EXACT' yellow 74.7). Big set pieces: cream paper + red extruded 'STORY' with dashed transform-box and drop shadow (1.0); Anton-black 'AGO' letters standing like props in the room (2.0); 3D glossy yellow/orange 'DREAM' in quotes with blue cloud puff glow (73.3-74.0); extruded orange glossy 'tide bottle' / 'in his room' letters flying through a streak tunnel with spark particles (24.0-26.7); stacked white blocky 'THAT KID WAS ME' glitch/pixel cut letters (65.3-67); text on a circular arc orbiting the head (50.3-52.7: 'but the version of him that chose comfort'); curved text ring around a TV (31-33); 'CLIENT' stamped on cardboard + sticker chat bubbles; $10,000 LED counter with eye icon view counter 10K->296K (57-58) = number count-up; 'JAPAN'/'DUBAI' distressed red/white halftone collage titles (62.7-63.7).
Backgrounds / scenes	mostly b-roll: composite mountain+torii (AI-looking collage 4.3-6.3), graduation portrait on purple wall in black frame, hands+dollar B/W, newspaper, paper script with magnifier, matchstick house, ace card, B/W party with white outline shapes drawn over bottles, shoe store, name tag 'Hello my name is Zache' B/W; cream paper void; hyperspace neon tunnel (purple/red - skip); green LED grid; flag collages
Camera	whip-blur zooms in text, push-ins on b-roll, defocus rack, hand-turn-page / folded-paper 3D flip (18.3-19.8), white flash, speed-ramp blur (67.0)
Transitions (with timestamps)	paper page fold, white flash (10.33, 53.0), black dips, blur-zoom whips, pixel mosaic, glitch stripes, screen-in-screen (frame 9.0-10.0)
Colour grade	two looks: warm amber lamps with red sofa for talking head; desaturated B/W/crushed for memories; purple walls only in reference
Human-made cues	grain/halation everywhere, uneven letter rotation, hand-turned page, drop shadows, scribble/neon outline shapes drawn on

10 · Hooks/ZOOM reel (imzache) — 37.5 s, 32.0 cuts/min [M]. Edited part: Whole reel is the edit (imzache 'hooks' reel, ~37.5 s, 30 fps).

Text styles	MAIN CAPTION SYSTEM = one white heavy grotesque word at a time (Inter-Black style, tight tracking, subtle drop shadow) dead-centre at chest height, changes every ~0.33 s with the VO (word-sync). Keywords go YELLOW-ORANGE heavy extruded with orange outer glow/bloom ('learn' + '!!' exclamation marks above head 0.0-1.5, 'Grow', 'Hooks', '30 seconds', 'First', 'A movement', 'A ZOOM' with zoom-blur, 'EXACT', 'need'). Clustered paragraph: from 14.0 a growing text block sits above the head in white+yellow mixed sizes with a yellow TRACKING BRACKET box following the face (14.0-18.7) — face-tracked UI. Yellow bookmark badge pops (5.67-6.3) with 'So save this video'.
Backgrounds / scenes	live shots in dark green/amber rooms (radio prop, lamps), then rapid b-roll: green-lit door, spot-lit lamp, blue-cyan hand/gym bar macro, white interior house with Family-Guy sticker, B/W silhouette against blinds (25.3-28.3), white overexposed bloom scene (30.7-32), black end card with FocusLens Kit text
Camera	speed-ramp zoom with radial blur on 'A ZOOM' (11.3-12.0), whip pans into blue streak (8.67-9.3), push-ins, orange full-frame flash (1.67), light-leak bloom white (30.7)
Transitions (with timestamps)	hard cuts on EVERY word in b-roll stretches (19.0-31.7: 20+ cuts), orange flash (1.67), spotlight circle wipe (3.0-3.5 'more','one'), whip blur, white bloom (30.7)
Colour grade	dark green/amber for the creator, cyan/blue for gym b-roll (ref-only), crushed blacks, subtle halation
Human-made cues	slight rotation on text blocks, uneven line spacing, follow-the-face tracker, mixed b-roll sources

11 · My intro/Camera (imzache) — 44.9 s, 24.0 cuts/min [M]. Edited part: Whole reel (imzache 'my intro/camera' reel, 44.9 s, 29.97 fps).

Text styles	Yellow-gold (#FFD21F) HEAVY condensed caps keywords with soft yellow outer glow ('try', 'again', 'last time', 'Zache', 'DISAPPEARED', 'A YEAR', 'NOT BECAUSE' in RED over yellow, 'IDEAS', 'DEPTH', 'LIGHT', 'CAMERA', 'FRAME', 'PAGE', 'DIFFERENT', 'STAY TUNED', 'LEARN'), white heavy sans + small white SERIF connectors ('it was', 'how to move a', 'I ran out of'); words enter with blur/zoom, stack and re-flow as the sentence builds; yellow tracking BRACKET on eyes (1.3-1.7); words drop in a vertical stack beside the face (23-24). 'HERE IS MY INTRODUCTION' in yellow inside an iPhone mock-up with cursor-less UI (4.0-6.0).
Backgrounds / scenes	live shots with white-zigzag wall and warm lamp; vintage parchment WORLD-MAP board with rounded photo cards + white pill labels (Camera Angles, VFX, Transitions, Lighting, Japan, Dubai, Vietnam) travelling along a RED route line (6.0-10.0, 19.0-20.7); macOS-style blue 'Trips' folder clicked by a cursor, word-by-word 'so I lived it instead' on the folder and photos burst out (17.0-18.7); parallax card-in-frame row (25.0-33.0): phone-ratio rounded card holding the talking-head slides, then zooms out into a white-bordered 3-card strip; hallway chair scene; laptop end scene with 'STAY TUNED' (44.0)
Camera	blur-in/whip, zoom-out reveal of card strip (30-32), tilt on phone mockup, rapid digital punch-in on 'so' (0.3)
Transitions (with timestamps)	WARM LIGHT-LEAK/film-burn flashes (orange->yellow with a big letter-shaped leak) at 0.0, 1.67-2.33, 10.0, 13.33, 16.67, 24.67, 33.33; white fade (4.0, 6.0, 24.67), card slide, folder burst
Colour grade	warm amber orange + teal-green shadows, bright parchment tones for map scenes
Text-as-UI	macOS Finder 'Trips' folder + cursor, iPhone mock-up, pill labels on route line (text-as-UI/ map UI)
Human-made cues	parchment texture, handheld b-roll, light leaks, slight card rotation, drop shadows

12 · 'How I made this video' (Blender+editor breakdown) — 52.7 s, 13.7 cuts/min [M]. Edited part: Whole video (52.6 s, 24 fps source, @pavelfucksu-style 'How I made this video' breakdown: it is an edit about editing; shows its own timeline/Blender UI).

Text styles	Small lowercase white Inter-style captions word-sync at bottom (everywhere, 0.33 s per word) on the breakdown screens; HERO type is 3D/glossy: yellow extruded italic 'how? i made this video' on a shattered-glass crack overlay (5.3-7.0), 3D chrome 'HAWAII' sign with sky and palm leaves (41.7-44.3), distorted glitch 'CUT' chrome letters (39-41); text over CRT screen as pink/white wavy 'and the crazy part?' with RGB-split glitch then 'i made it in less than a day' with red letters flying off (2.3-5.0); PayPal-style white pill notifications '+$ 1999 USD' with a cursor hand (1.0-2.0); neon-pink handwriting annotations ('+solidify for thickness!', 'time remap graphs!' + arrow, 31.3-36.0) drawn over screen recordings; cursor clicks on folder (Windows XP Bliss wallpaper), Blender logo (13.7-15.0), Instagram Follow button (52.0).
Backgrounds / scenes	3D-rendered retro CRT computer on wooden desk with blue studio gradient and flying lamp (0-7), Windows-XP green hill + blue sky (7.3-9), editor timeline (Premiere-like) UI with waveform tracks (9-10.7 and 47.3-49.0), Blender viewport grey grid with shark/cage/ocean volume scenes (15-33, 36-38), underwater rendered shark cage scene (22.7-25.3, 33.7-34.7, 49.3-50), phone in plane cabin match-cut to Hawaii 3D text (39.3-44.3), pixelated blue transition (44.7-47), creator's own clip (guy in shorts/yellow lens) inserted in the timeline
Camera	3D camera orbit/push on CRT (1-5), glass-shatter shake (5.3-7), speed ramps / time-remap (36), whip blur (33.0-34.0), match-cut phone->window (40.7-41.7)
Transitions (with timestamps)	match cuts (phone screen -> airplane window -> Hawaii sign), crack glass, green chroma-flash (0.67), blur dissolve, pixelation mosaic transition (44.7), white bloom (41.0), diagonal split reveal (37.3, 50.3)
Colour grade	blue/teal 3D lighting with warm wood; neutral grey UI; underwater deep blue (reference-only)
Text-as-UI	strongest 'edit about editing' reference: Blender UI, timeline, constraints panel, cursor

Tool evidence	VISIBLE in the video itself: Blender 3D viewport + Blender logo (13.7-15.0, 15.3-38.0), a Premiere/After-Effects-style timeline with track names (9.0-10.7, 47.3-49.0); creator narrates 'i added... a Follow Path constraint, ocean modifier, volume shader, time remap graphs'. So refs like this DO use Blender for 3D objects and an NLE/AE for assembly.
Human-made cues	screen-recording imperfections, hand-drawn pink annotations, glitch RGB split

3. Merged: what makes these look human-made, not AI [E, with the burst frames as evidence]

• **Imperfect, hand-placed text**: words rotate 2–8°, sizes differ inside one sentence, letters arrive one by one with overshoot and blur (burst ref1 29.8–29.97 'UP', ref10 11.47–11.8 'ZOOM', ref4 5.9–6.4 'ten grand'): never 'all letters same ease, same scale, same millisecond'.
• **Texture on everything**: film grain/halation, dry-brush edges on red words (ref7 'WRONG'), torn paper with rough edges (ref1 4.67/21.67, ref4 5.67), parchment/paper textures (ref11 map, ref9 cream paper), vignette, drop shadows with soft contact shadow (ref8 3D bookmark, ref7 cards).
• **Real footage is the base**: handheld creator or real b-roll; graphics are added ON it (cards at slight angles, frames the person 'holds', cursor that wobbles) — AI-looking edits are the opposite: everything perfectly centred, symmetric, 0° rotation, gradient + glow over empty background.
• **One idea per beat, punctuation by hard cut + 1–3 frame flash** (ref1 29.43 white single frame, ref11 2.13 orange leak) — not smooth crossfades everywhere. Pace changes: fast stretch then a breath (ref6 holds 13–17 s; ref9 alternates).
• **Words act out their meaning**: 'ZOOM' flies in huge then the clip zooms (ref10), 'SAVE' becomes a clicked bookmark (ref1/2/8), 'Button' becomes a real pill (ref3), 'loss' flips the grade lilac→red (ref6 17.77–17.97), 'cracked' glass overlay (ref2 27.4). The effect is the joke.
• **Mixed type system, not one font**: heavy grotesque sans for most words + ONE extruded accent colour (red or gold/yellow) + tiny serif or script connector (ref1 script 'again', ref11 serif connectors, ref5 handwritten + red underline). Glow is warm (orange/red/yellow bloom) — the cyan/magenta glows in ref6/8 are the reference-only exception we skip.
• **Human timing noise** (our rule): ±1–2 frame jitter on pops, ±2–4° random rotation, ±6% scale, per-letter stagger 2–4 frames, grain 3–6 %, never repeat the same sfx sample twice in a row.

4. Reusable effects ranked by how often they appear (of 12 refs) — with recipe sketches

#	Effect	Refs	Which	Recipe sketch (EffectCraft / ffmpeg / Python)
1	Word-sync captions: one word/phrase at a time, white heavy sans, ONE coloured keyword	11	1,2,3,4,5,6,7,9,10,11,12	EffectCraft: captionLine() per word (zq_lib.jsx) from words.json times; keyword in gradient/extrude layer; pop = scale 0.8→1.08→1 over 5 frames + blur 8→0; jitter ±1 frame.
2	Hard-cut b-roll/scene change on the word (1–3 s per shot)	9	1,2,3,4,7,9,10,11,12	ffmpeg concat of Pinterest clips trimmed to word times; every cut on a word start; keep 2.3 s average (median measured).
3	Flash punctuation: 1–3 frame white / B&W; / orange light-leak on a cut	9	1,2,4,5,7,9,10,11,12	EffectCraft flash(): white solid 1–3 frames at 100→0 %; light leak = warm radial gradient blend 'screen' 5 frames (ref11 2.13) ; B&W; = grade layer sat 0 for 2–6 frames.
4	Extruded 3D keyword (red / gold / yellow) with glossy bevel + warm glow	8	1,2,4,7,9,10,11,12	EffectCraft: 10–14 stacked copies of the text offset 1 px (2.5D) + dark side colour + top highlight layer; Gaussian glow (warm) 0.35; per-letter stagger; NOT Blender for text.
5	Text-as-UI: cursor, click ripple, pill/button, toggle, bookmark, notification card	8	1,2,3,6,8,10,11,12	EffectCraft: card + cursor tap + ripple (zq_lib.jsx); cursor path with 1 overshoot; button scale 0.9→1.05→1; word turns into pill by cross-fade over 3 frames (ref3 1.70–1.77).
6	Punch-in / push-in (digital zoom 1.0→1.15) on emphasis	8	1,4,5,6,7,10,11,12	ffmpeg zoompan or EffectCraft scale keyframes: 6–10 frames ease-out, hard cut to the zoomed crop (ref6 17.43).
7	Whip / zoom / spin blur transition	7	1,2,7,8,10,11,12	EffectCraft whip(): directional blur 0→60 px over 3–4 frames + slide 20 % ; ref1 29.4 uses rotation blur (spin 180°) + 1 white frame.
8	Frame-in-frame / phone mock-up / rounded card	6	1,3,4,5,6,11	Rounded-rect mask on the clip (radius 60 px), drop shadow, 3D tilt ±8° (EffectCraft card()); person 'holding' a frame = cut-out + frame layer.
9	Photo-card stack / parallax cards around the subject	5	1,3,5,7,11	6–8 rounded photo cards, each own rotation/scale, fly in with 2-frame stagger, soft shadow; behind the cut-out subject = same mask as recipe 11.
10	Text on a curve / circle / arc path	5	1,3,4,7,9	EffectCraft: per-letter layers positioned on a circle/arc (python-computed coordinates), rotate with tangent, orbit 0.3–1 s.
11	B/W (desaturated) insert shot	5	1,2,4,9,10	grade layer saturation 0 + contrast +25 % for 0.3–1 s on a memory/b-roll shot.
12	Torn paper / paper-fold reveal	3	1,4,9	Python/PIL: generate rough tear edge mask (noise-displaced line), reveal layer under; 7-frame wipe + white edge strip + shadow; page fold = 3D card flip around Y-axis 0.8 s (ref9 18.2).
13	Glass-crack / glitch / RGB-split / datamosh accent	3	2,9,12	Crack PNG overlay + RGB channel offset 3–6 px for 3–6 frames; horizontal slice shift; ffmpeg 'rgbashift' + 'tblend'.
14	Neon-scribble / hand-drawn annotation / underline	4	5,8,9,12	SVG path trimmed 0→100 % over 12 frames (EffectCraft Trim Paths) in warm orange/red.
15	Behind-subject big word (cut-out) — Notion-page method	1 (+ref 4 partly)	7 (4)	= kit recipe 11 word_behind_head. ref7: red poster/box, white→red liquid fill, small white words in front.
16	Warm light-leak / film-burn / bloom washes	4	4,5,10,11	warm radial gradient 'screen' blend 5–10 frames with ease-out decay (ref5 12.82→13.07 orange wash fading ~0.25 s).
17	Face-tracked bracket / UI tracker on the face	2	10,11	yellow corner-bracket box following eyes (per-frame face box from mediapipe/opencv) + text block around it.
18	Speed-ramp / word-acts-out-meaning zoom	2	10,12	ffmpeg setpts ramp or EffectCraft time remap; 'ZOOM' flies in huge then the clip zooms out (ref10 11.5–11.9).
19	Number counters / LED digits / year ruler	2	5,9	python-drawn digits per frame; ease-out count 0→N in 18 frames.
20	Sunburst / radial light rays flash	1	1	conic-ray PNG rotating slowly + radial mask; ref1 35.33 (kit already has sunburst).

Counts are eyeballed [E] from the sheets/bursts (a ref can contain an effect once or twenty times; ranking is by how many refs use it). Cut counts/min above are measured [M].

5. SFX gap — measured from the audio files (I cannot listen; numbers only) [M]

#	LUFS int.	True peak dBTP	Crest dB	Sub 30–90 Hz share dB	Air 4–11k vs mid dB	Low-heavy hits /s	Rising swells /min	Speech s/s

12	-14.2	3.0	16.2	-5.5	-9.8	0.47	3.4	0.91
OURS	-14.0	-3.5	13.8	**-21.3**	**-25.9**	0.18 (design 3.27/s, mostly buried)	14.5	0.83
refs median	-14.2	-0.7	15.8	-7.3	-15.8	0.46	9.7	0.80

1. Our sfx are nearly inaudible by the numbers. Regressing our reel's audio on its own tracks (vo_clean + sfx.wav) gives voice ×1.03 and sfx ×0.32: the SFX contribute −44.9 dBFS RMS vs voice −17.5 and music/bed −31.7, i.e. **27 dB under the voice and 13 dB under the music**. In the 150 ms

after every one of our 54 sfx events the sfx is 14–52 dB (median 32 dB) below voice+music; 0 of 54 are within 6 dB. Clicks median −45 dB, pops −26…−34 dB, whoosh −30 dB, bass −32 dB, impact −25 dB. Masked sound can still show up as a thin digital tick — that matches 'khatiya' — but I can't hear it; this is the level math.
2. Wrong type mix and carpet density. Ours: 54 events in 16.5 s = **3.3/s** (pop 28, click 11, whoosh 7, bass 4, impact 3, ding 1) — a click+pop on nearly every word. Refs: only 0.04–0.87 low-heavy transients/s (median 0.46) plus ~10 rising swells/min; their sound is mostly a continuous music bed + a few big hits. Our pop/click samples are bright and short (centroid 2.3 / 5.0 kHz, no low end); whoosh_fast has ~1 % energy below 200 Hz (centroid 1.4 kHz): thin.
3. No weight. Sub-bass (30–90 Hz) share: refs median −7.3 dB of total energy (−5.5…−10.4; ref3 −17 is a UI promo), ours **−21.3 dB (about 14 dB less)**. Air (4–11 kHz vs mids): refs median −15.8 dB, ours −25.9 (10 dB duller). Peak room: refs median true peak −0.7 dBTP and crest 15.8 dB, ours −3.5 dBTP and 13.8: ~2.8 dB less punch headroom used. All are −14.0…−14.3 LUFS, so loudness itself is fine.
4. Not the gap: voice vs music balance (word level −15.4…−17.0 dBFS, between-word floor median −19.4 vs ours −21.2/−17.0: the bed sits ~3–4 dB under the voice in both), silence holes (none >0.3 s below −55 dBFS in any ref or ours), voice share of the timeline (refs 0.44–0.91 s of speech per second, ours 0.83).
5. Cut-locking cannot be proven from refs. Fraction of 195 visual cuts with a low-frequency transient within ±60 ms: 27 % real vs 27 % after shifting cut times randomly — no measurable per-cut sync in mixed audio (music masks it). So 'hit exactly on the cut' is common editing practice [not measured here]; what IS measured is level, weight, density and type.

Proposed fix list (not applied — nothing remixed yet; each item is checkable with the same numbers)

• F-1 **Level**: raise the SFX bus ≈ +18 dB in the final mix so impacts/whooshes peak within ~3–6 dB of the voice peak and pops/clicks sit ≈ −10 dB under voice RMS (now −27). New gate F15 in qc: regress final mix on vo+sfx; sfx RMS must be ≤ 18 dB under voice RMS and ≥ 70 % of events ≤ 12 dB under voice+bed.
• F-2 **Density**: from 3.3/s to ≈ 0.5–1.5/s. Sound only on: big words (impact + short sub tail), cuts/transitions (whoosh), emphasis zooms; no click+pop on every caption word. Max one sound per cut.
• F-3 **Weight**: add a continuous sub-heavy bed (music EQ +5…+8 dB low shelf <120 Hz or a 45–60 Hz sine swell under each big word) to reach sub share ≈ −8 dB; add 4–11 kHz air layer (noise swell on whooshes) to reach air ≈ −16 dB.
• F-4 **Types**: replace whoosh_fast with the full-spectrum whoosh/whoosh2 + riser (0.6–1.0 s before a big word); keep impact.m4a/bass.m4a for big words; retire pop.mp3/click.m4a as per-word ticks.
• F-5 **Master**: limiter to −1.0 dBTP at −14 LUFS (ours −3.5 dBTP) for 2–3 dB more punch.
• F-6 **Human feel**: ±15 ms timing jitter, ±1.5 dB gain jitter, ±3 % pitch, 3–4 sample variants per type, never the same sample twice in a row.
• F-7 **Proof loop**: ship tools/audio_gap.py (added to kit v5.5): prints the table above for any mix + its own tracks; final judgement is still Sujon's ears (I cannot listen).

6. Which tool was each made in? (only where evidence is visible)

Ref 12 — visible evidence in the video itself: Blender 3D viewport and Blender logo (≈13.7–15.0 s and 15.3–38 s: Follow Path, ocean modifier, time-remap graphs narrated) and a Premiere/After-Effects-style timeline with track names (≈9.0–10.7 s, 47.3–49.0 s). **Ref 8** — end card says 'MADE BY A HUMAN', an unofficial UI concept; tool not shown. **Refs 1–7, 9–11: cannot tell** — the glossy extruded text, cut-outs and cursor UI are consistent with After Effects / CapCut / Cinema 4D / Blender, but no UI, project panel or watermark is visible, and the file metadata carries no software tag. (My earlier WhatsApp reply 'After Effects/Blender jaisa lagta hai' was a guess; this is the evidence-based version.)
Not verified: that every effect listed exists exactly as described in unseen frames between the 3 fps samples; exact font names (looks-like only); sound character is not heard; scene counts on refs 5/6 come from the edit-panel crop (eyeballed crop box); counts of the ranked effects are by-reference presence, not per-reel counts.
